5608	Vehicles, Trailers & Boats (Nested) - More than 14 feet	GNL**	\$9,000

DETERMINING YOUR FREIGHT COST

DIMENSIONAL FREIGHT

Dimensional weight, also known as volumetric weight, allows us to estimate weight that is calculated from the length, width and height of bulky freight.

HOW DO I CALCULATE DIMENSIONAL WEIGHT?

Follow this formula:

$$L'' \times W'' \times H'' \div 194 = \text{Dimensional weight}$$

Example: $(48'' \times 48'' \times 40'') \div 194 = 475 \text{ Pounds}$

We use the actual weight or dimensional weight, whichever is higher.

COMMODITY RATING

How do I calculate commodity rates?

Here is the Motorcycle Rate (160%) as an example:

$$\text{General Rate} \times 1.6 (160\%) = \text{Commodity Rate}$$

Visit nac.aero/rates for a full list of General Rates to each NAC hub.
